PROJECT DESCRIPTION

AIM:

Our program helps to manage various day today activities of HOTEL SCHOOLVIEW like booking a room, generating bill, rescheduling, etc..

No cancellation of booking is allowed. There are 30 rooms of three types(10 of each type). Rooms are allotted during check - in date. Options for food and laundry services are also provided.

USER TYPES:

1.ADMIN: Admin is the head of all activities. Activities that can be done are listed below

- BOOK ROOM
- VACATE ROOM
- VIEW CUSTOMER DETAILS
- CHECK AVAILABILITY
- ADD/MODIFY/REMOVE ADMIN
- GENERATE BILL
- RESCHEDULE
- SEARCH CUSTOMER // Gives all details of customer of particular name
- GENERATE REPORT

2. CUSTOMER OR USER : He can perform the following activities

- VIEW DETAILS
- VIEW AVAILABLE PROMO CODE
- CHECK AVAILABILITY

CLASS USED:

Customer Class:

It has only data members(check in date, month, year check out date, month, year, name, phone number, age, address, customer id, no of members, no of rooms).

Hotel Class :

It inherits customer in private mode

member functions are :

- i. void addmin(string);
- ii. void addtorecord(customer&); //add customer details to the file
- iii. void adminlogin();
- iv. void book(); //allows admin to book a room
- v. double discount(int); //gives discount based on no of visits
- vi. void genbill(int);
- vii. int id(); //provides unique id for the customer
- viii. void incemployees();
- ix. void vacate();
- x. void viewdetails(int); //for checking details of customer and to check availability

Room Class:

It has only data members.

Data members are customer,roomno,roomtype

FILES USED:

users.txt //contain details of all the customers

dates.txt //contains all dates in which rooms are booked

rooms.txt // details of all the rooms(name and other details of customer along with roomno).

id.txt

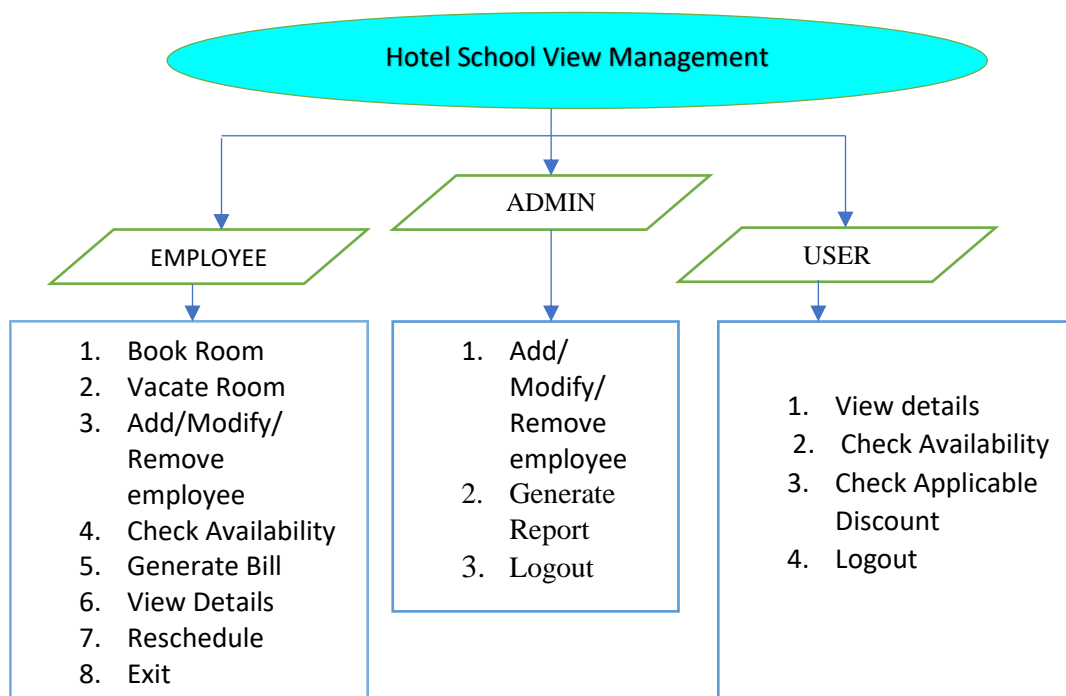

admin.txt //contain password of the admin(encrypted)

REPORT GENERATED:

generates all the details of customers who checked in and checked out along with the bill amount on a given date.

Project Planning

Flowchart of outsketch of programming modules

SHORTCOMINGS:

1. It cannot be used for managing multiple branches of our hotel, though it can be developed later.
- 2.This is not an online booking portal. Only employees of the hotel can book for the customers either through phone or in person.
- 3.Booking is not allowed after check in time of 12 noon for that day.
4. No cancellation is allowed, as money cannot be refunded.

CONCLUSION:

The project titled "HOTEL MANAGEMENT" done by ABISHEK.S AND AHMED SHAMSUDEEN for the academic year 2017-2018 has been completed and compiled, tested, and executed successfully.

It is a successful attempt to simulate a Hotel management system without the usage of graphics.

It is a try to bring it as close to reality as possible.
